DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 08/21/03 has been entered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 28-30, 32 and 33 through are rejected under 35 U.S.C. 102(e) as being anticipated by Han et al. (U.S. Patent No. 6,429,129 B1).

In re claim 28, Han discloses an integrated circuit structure, comprising:

At least two metal interconnect lines (12);

A liner (14) comprising silicon and carbon located on and between said metal interconnect lines; and

Art Unit: 2815

A dielectric layer (16) positioned between said metal interconnect lines, the liner positioned between at least a portion of the dielectric layer and the metal interconnect lines.

In re claim 29, Huang discloses the device of claim 28, wherein the liner is silicon carbide (column 2, line 66).

In re claim 30, Han discloses the device of claim 28, wherein the dielectric layer comprises an intralevel dielectric layer (column 2, line 48) positioned between metal interconnect lines in a level of the integrated circuit structure.

In re claim 32, Han discloses the device of claim 28, wherein the dielectric layer comprises a fluorinated dielectric material (column 3, lines 35-39).

In re claim 33, Han discloses the device of claim 28, wherein the dielectric layer comprises PTFE (column 3, line 39).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 31 is rejected under 35 U.S.C. 103(a) as being unpatentable over Han as applied to claim 28 above, and further in view of Loboda et al. (U.S. Patent No. 5,818,071).

In re claim 31, Han discloses the device of claim 28, but does not expressly disclose a dielectric layer comprising an interlevel dielectric layer positioned between conductive elements in different levels of the integrated circuit structure. Loboda discloses a dielectric layer (5, 9)

Art Unit: 2815

comprising an interlevel dielectric layer positioned between conductive elements (6, 7) in different levels of the integrated circuit structure. It would have been obvious for one skilled in the art at the time of the invention to add additional levels as disclosed by Loboda to the device of Han for the purpose, for example, of creating a multi-level device (Loboda; column 3, lines 59-66) to enhance the device density of the integrated circuit.

Response to Arguments

6. Applicant's arguments with respect to claims 1-17 have been considered but are moot in view of the new ground(s) of rejection.
